Fluency offers a SIEM solution that is between that of a fully managed version and an automated unmanned version. The consolidated view of their log monitoring assets saves me time. In fact, I regain 35% of my workday with Fluency! Now I monitor two portals instead of six. When you are handling a million alerts a day the Risk score is a sure warning of what is a priority alert. Admittedly, price was a key factor in choosing Fluency. They came in considerably less than their competitors. Candidly, Fluency deserves to be successful for all their hard work and focus on the client.

TIM DUNCAN
IT Manager

Tim has 15 years of experience in IT security. He is responsible for managing and mentoring the IT team. Additionally, he oversees the budget for IT. He provides reports for C-level management.
Fluency’s SIEM tool has a Sophisticated scoring algorithm; The product provides a great signal to noise ratio.

Several unique features set Fluency apart from other offerings in the SIEM space. These features include behavior profiling which aggregates scores from individual risks into a single risk metric. This approach lets the Security Analyst focus on high-risk events requiring immediate action, while low impact or routine events are archived for later review.

Fluency improves the signal to noise ratio in the security data, resulting in a better and more effective event monitoring tool. This feature enables small IT teams to be more efficient.

MARK PETRY
Manager, Security and Compliance

Mark has over 20 years of experience in security, compliance and governance. His knowledge includes cloud-based business continuity and disaster recovery.
